decision
in flight (still served by the old station)
landing on a full station
landing with room
(a) Planning on where vehicles are now: vehicle b is sent to the place vehicle a will take (Theorem 1)
in flight: L slots
vehicle a
lands at Y
vehicle b
lands at Y
station Y
one free place now; at t+1 vehicle a is in flight and not counted at Y, so Y still shows room
✗ C + 1 vehicles at Y: one has no place
(b) Planning on the landing state (LSRA): vehicles in flight count where they will land
in flight: L slots
vehicle a
lands at Y
vehicle b
lands at Z
station Y
at t+1 the landing load of Y already counts vehicle a: C, so vehicle b is given Z
✓ C vehicles at Y: every vehicle has a place
t
t+1
t+2
...
t+L
t+L+1
t+L+2
slot (0.1 s each); L = handover delay in slots
